

SF4012519

Report 5 - Customer by child combinations eligible for CCR for 2011/12 at the Maximum CCR Limit

As at 16/09/12

Table 5A**

	Number of Children			
Summary	1	2	3	>4
Number of Customers	18118	1754	38	1

IMPORTANT NOTE:

* Count is year to date at the report end date.

** Demographic breakdown is not required as tests on the data indicate a very limited number of customer numbers (indigenous showed nil customers) appearing in these demographics which will result in many reports being provided but nil data being displayed.

Each customer may only appear in one column, i.e. no customer is double counted. For example, if they are paid up to the limit for two children they are counted in the two children column and not counted at all in the 1 child column.

This report shows all customers who were calculated for CCR as at the reporting date. Figures are YTD, this means that a customer who appeared in a previous reporting period in a particular row/column, may appear in a different row/column in the new reporting period if the customer has had a recalculation of CCR. Where more than one re-reconciliation / recalculation of CCR for a customer is made in the period only the latest data is reflected.
